

WHERE **IRON AGE** ARE MADE

BATEMAN M'F'G CO.,

ESTABLISHED 1811
GRENLOCH, New Jersey, U. S. A.

Canadian Factory, Toronto, Ontario

Tools are carried in stock at centers of distribution. Liberal stocks of suitable tools for each vicinity are carried by the best class of implement and hardware dealers in the country.

If not handled by your local dealer, write us for nearest address where tools can be seen and explained.

Easily operated by any boy or girl. It is a reliable rake - the kind you want.

It's the hay you save that counts

The Profit from

A fine seeding, a first-class stand, a good growing year, may easily be turned into loss unless you have

A Standard Reliable Rake

that will save all of your increase and not spoil part of your crop

Genuine New York Champion Wood Hay Rake

Especially suited to stand rough work on the rolling land of eastern territory—more so than the all-steel rakes which were so popular at one time.

The record of forty odd years behind this rake is worth remembering. Originated by Wm. H. Patten and made by Patten & Stafford at Canastota, N. Y., as a specialty, they came to be regarded as the standard in their line—the reliable rake—always ready when needed—always up-to-date or ahead of its time. Light, strong, compact, well put together, convenient, draws even-

ly, cleans the ground, gets all the hay that any rake can get.

The trade, dealer and consumer think very highly of this rake, especially in the North Atlantic and New England States, and no farmer is ever disappointed—he has an honest affection for this machine.

The sole right to manufacture is ours by purchase in 1908—and we make the genuine, in every respect.

Two styles are made—one with complete wood axle; the other with wood axle reinforced by angle steel.

Sizes and Prices

STYLE	WEIGHT	EQUIPMENT	PRICE
No. 1820	299	8 foot 20 T., wood axle

If wanted with combination pole and thills (Fig. 271) add letter "C" to the number and to the price. If with steel wheels add letter "S" to the number.

Have Never Had One Brought Back

We have sold the New York Champion Hay Rake for 10 years. We let them out on trial—we have never had one brought back and have never had a dissatisfied customer. We have had customers come to us and say, "I have a New York Champion Rake, I have had it 20 years and I want another just like it." It is safe to say that over half of the farmers in our town have a New York Champion Rake, and you can count on us for New York Champion customers.

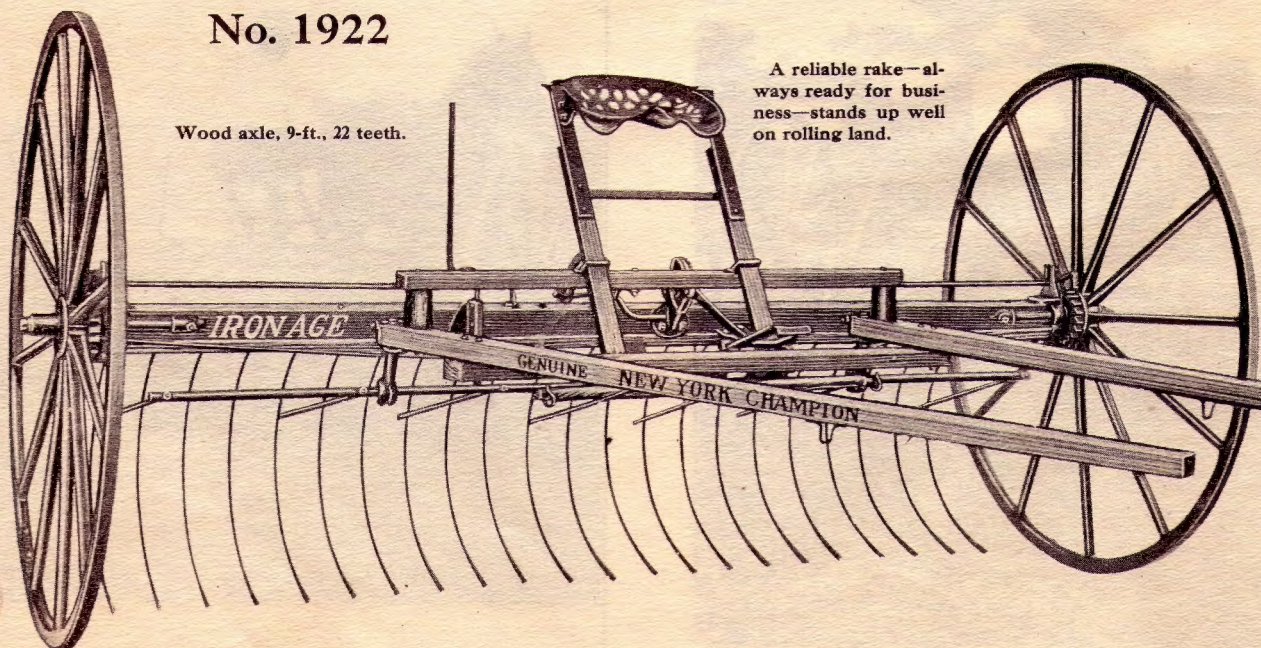

LOVEJOY & MATHER.

PHILADELPHIA, N. Y., Dec. 10, 1912.

No. 1922

Wood axle, 9-ft., 22 teeth.

A reliable rake—always ready for business—stands up well on rolling land.

GRENLOCH, N.J., U.S.A.

IRON AGE

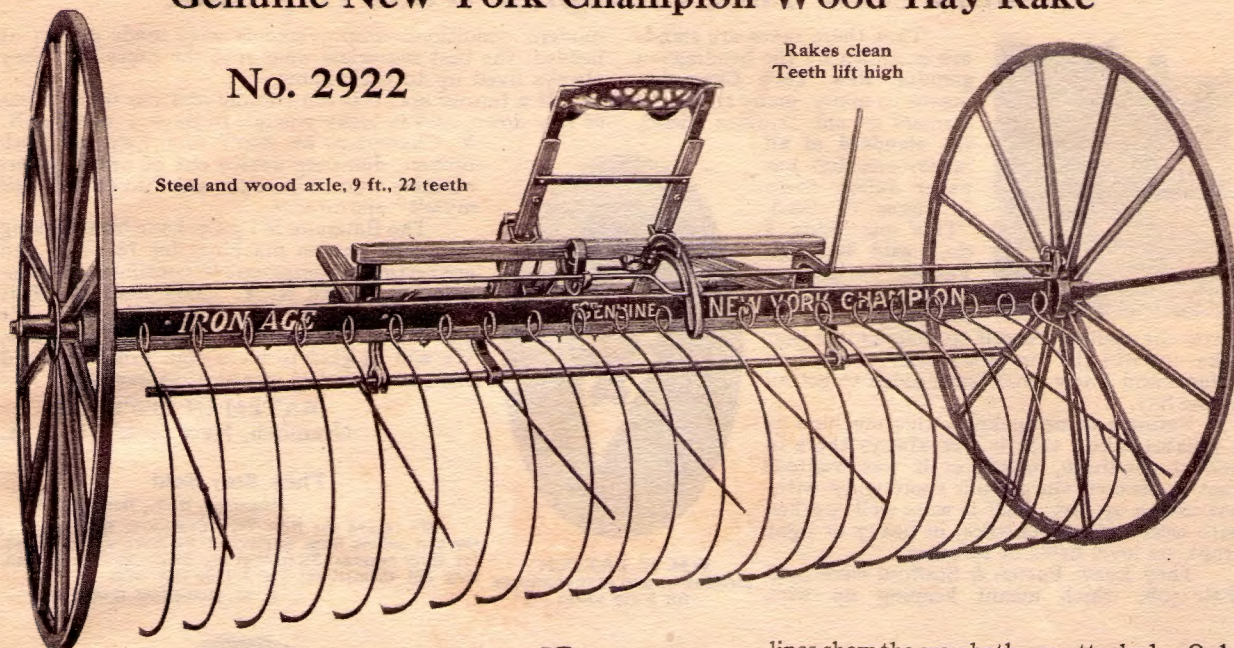

SEVENTY-EIGHT
YEARS IN BUSINESS

Genuine New York Champion Wood Hay Rake

No. 2922

Rakes clean
Teeth lift high

Steel and wood axle, 9 ft., 22 teeth

The teeth. Oil tempered, flat pointed (sled-runner shape), interchangeable (no rights and lefts). They hang low, lift high when dumping, are not fastened in their holders, but have free action; are not easily damaged.

Cleaners are steel, diamond shaped, securely bolted to steel pipe. They pack the hay as the teeth fill and keep it from rolling.

Larger windrows and bunching made with cleaner foot lever.

Dumps with one-piece rod from both wheels at once—this makes even draft. Levers hand and foot, give the driver control at all times.

Wood wheels furnished unless otherwise ordered. They have loose hubs and separate ratchets which are easily replaced when worn.

9 and 10 foot rakes are trussed to prevent sagging in the center.

Combination pole and thills. Fig. 271. For two horses or one. Can be furnished for any "Iron Age" (New York Champion) rake. A practical combination. The solid parts in the cut show what is necessary to make the thills into combination pole and the dotted

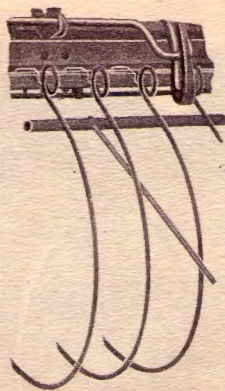

Fig. 342
Interchangeable teeth, flat-pointed, have free action

lines show the way both are attached. Order new rakes this way by adding letter "C" to the number, as No. 1820C, and add to the price.

Patten & Stafford repair parts. We have the original patterns for parts on the principal styles of New York Champion rakes and can furnish parts that will fit.

Wife or Girl Can Use Them

OXFORD, N. Y., Dec. 11, 1912.

We have sold New York Champion wheel rakes for more than twenty-five years and always with satisfaction to both ourselves and the farmer—they handle so easy that the wife or girl can use them as well as expensive help. Being well made, they always wear well and the neighbor wants one like it. We have sold many other kinds, but the "New York Champion" for us every time.

IRON AGE

SEVENTY-EIGHT
YEARS IN BUSINESS

Genuine New York Champion Wood Hay Rake

That these rakes are standard is shown by the heading—a genuine New York Champion means to many, many thousand farmers an old, familiar friend, the standard of all rakes—one that has never failed them in times of need. "This one thing I do," said Wm. H. Patten, originator and manufacturer for forty years or

more—he applied himself to making the best rake—he was the son of a farmer, worked on a farm and knew what was needed to get all of the hay.

Farmers came to know this machine as a reliable rake; that it was always there in perfect condition, whenever it was wanted; that it cleaned the ground thoroughly without taking up dirt; that it wore well, worked with ease and convenience, in heavy or light crops, on level fields or hillsides.

They knew Patten & Stafford were onto their job, which meant keeping up with

for forty years

modern conditions—improvements were made as fast as needed, the best materials went into the rakes, and they always lived up to their name.

If a farmer sees a storm coming and has many acres of hay down, and is lucky enough to have a genuine N. Y. Champion, he don't find half the teeth broken, dumping device out of order, wheel ratchets worn, and a general "don't feel well myself" appearance.

The Bateman M'fg Co. have been making farm and garden machines for 78 years and are certainly competent to continue the manufacture of the N. Y. Champions in their original form and the same high grade. We are the only ones making the original rake. We will be glad to have your order and add one more satisfied customer to our list.

They Stay Sold

Edmeston, N. Y., Dec. 12, 1912.

We regard the New York Champion Hay Rake as the best selling farm implement we have ever handled, for three reasons: First, they are widely known; Second, they sell themselves; Third, they stay sold.

C. W. HOPKINS' SON & CO.

Cocking hay in the windrow. The teeth lift high when dumping
